(a)
Dice (higher is better)
mean Δ = +0.0104
95% CI [+0.0044, +0.0166]
Wilcoxon p = 1.4e-02 *
improved on 52.8% of images (n=614)
BRM better
baseline better
test images
ΔDice (BRM − baseline)
(b)
HD95% (lower is better)
mean Δ = -1.2495
95% CI [-1.8945, -0.5918]
Wilcoxon p = 4.5e-03 **
improved on 53.4% of images (n=614)
BRM better
baseline better
test images
ΔHD95% (BRM − baseline, % of diagonal)
(c)
Effect by domain (positive = BRM better)
in-domain: significant gain
cross-domain: small, within seed variance
(stars = image-level test; see panel (d))
paired effect size (Cohen's d_z)
